### Risk and return profile

This risk indicator is designed to illustrate the fund's risk/return profile. The higher the rating on the scale, the greater the earnings potential, but also the more significant the risk of suffering a loss. This risk indicator is based on historical data and therefore cannot predict future performance. The rating may change in future and does not represent a guarantee. A category 1 rating also does not represent a completely risk-free investment. The unit class is rated as category 4, because the unit class price has demonstrated moderate levels of variation in the past.

The following risk categories may be of significant importance and are not adequately encompassed in the risk indicator:

**Liquidity risks:** Where a significant level of investment is made in financial instruments, which by their nature are sufficiently liquid, but which under certain circumstances can have a relatively low level of liquidity, this may have an impact on the level of liquidity of the sub-fund as a whole.

**Default risk:** The fund transacts business with several counterparties. If a counterparty becomes insolvent, the fund's outstanding debts may not be paid or may only be partially paid.

**Operational risks and risks relating to the custody of assets:** The fund may fall victim to fraud and/or other criminal activities. It may incur losses due to external events, insufficient internal processes, system failures or human error on the part of the management company, custodian/sub-custodian or external third parties.

**Derivative risks:** The fund may use derivatives. These are instruments whose value is based on an underlying instrument. Minor changes in the value of the underlying instrument can lead to major fluctuations in the value of the derivative, meaning that the use of derivatives may entail additional risks.

**Credit risks:** The sub-fund invests directly or indirectly in bonds / convertible bonds. If the issuer of a bond / convertible bond does not pay interest on time or does not repay the nominal amount, the bond / convertible bond may suffer a significant or total loss of value. A downgrading of the issuer's credit rating may also cause the bond / convertible bond to suffer a significant or total loss of value.

**Emerging market risk:** The sub-fund invests in emerging markets (less developed markets) which are generally associated with a higher level of political, regulatory and legal risk. Increased economic uncertainty, lower liquidity, a higher rate of inflation and lower total capitalisation are also to be expected.
