Risk and Reward Profile

Lower risk Higher risk

Potentially lower reward

Potentially higher reward

1	2	3	4	5	6	7
---	---	---	---	---	---	---

This risk and reward indicator illustrates where the Fund is positioned in terms of its possible risk and reward. The higher the Fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. This risk indicator is calculated using historical data, which cannot be used as a prediction for the future. Therefore the risk classification may change over time. Even if the Fund is in the lowest risk class you can lose money, as no investments are entirely risk free.

This Fund is in category 4 since the price changes of the Fund have been moderate in the past.

The following risks are not fully reflected in the above classification but still influence the Fund's value:

Counterparty risk: The Fund enters into contracts with various counterparties. If a counterparty does not fulfil its obligations to the Fund (e.g. not paying an agreed amount or not delivering securities as agreed) the Fund can suffer a loss.

Operational risks: The Fund may become the target of fraud or other criminal acts. It may also suffer losses as a result of system failures as well as of processing mistakes or misconduct of company employees or an external third party. External events such as political, legal and economical changes and natural catastrophes beyond control may have a predominantly negative impact on the administration of the Fund's assets. This may lead to the fund having either none or only a limited amount of assets at its disposal.
