Risk and reward profile

What does this synthetic indicator mean?

- The shares of class B1 are classified in category 5 because the value of the share may be subject to high variations and consequently the risk of loss and the opportunity of gain may be high.
- The risk category has been determined on the basis of historical and simulated data and may not be a reliable indication of the future risk profile. The risk and reward category shown does not necessarily remain unchanged and the categorisation of the fund may shift over time.
- The lowest category does not mean a risk-free investment.
- Repayment of the initial investment is not guaranteed.

Which materially relevant risks are not adequately captured by the synthetic indicator?

- The investment in debt instruments bears a credit risk insofar as the issuer may refuse or be in a position where it is not able to reimburse all or part of the interests or even of the principal due on the debt instruments. This may result in significant or even total losses of the value of the investments in these debt instruments.
- Other risk factors, that an investor shall take into account with regards to his own situation and specific current and future circumstances, may exist.
